GUIDELINES FOR RESPONSIBLE USE OF ARTIFICIAL INTELLIGENCE IN THE DOCTORAL DISSERTATION:

A Principled Framework for Scholarly Integrity at East Stroudsburg University

Fernando Alcántar
falcantar@esu.edu

Executive Summary

The rapid emergence of artificial intelligence (AI) tools has introduced new opportunities and challenges for doctoral education. As AI becomes increasingly embedded in academic workflows, East Stroudsburg University (ESU) recognizes the need for clear, principled guidance that supports responsible use while preserving the integrity, rigor, and developmental purpose of the doctoral dissertation.

These guidelines provide a framework for the responsible use of AI in the doctoral dissertation process. Rather than prescribing tool-specific rules or prohibitions, the document articulates shared values and expectations grounded in doctoral pedagogy, scholarly responsibility, and institutional integrity. Central to this framework is the understanding that the dissertation is both a scholarly product and a formative process through which doctoral candidates demonstrate independent inquiry, original contribution, and the ability to defend their work.

The guidelines emphasize several core principles:

- doctoral candidates retain full ownership and responsibility for their scholarly work;
- AI tools may support scholarly processes but must not substitute for intellectual labor;
- accuracy, verification, and transparency are essential to maintaining academic trust;
- ethical awareness, data privacy, and critical judgment are required when engaging with AI; and
- responsible AI use depends on shared understanding among doctoral candidates, faculty, and institutional advisors.

This document is advisory in nature and is intended to support dialogue, mentorship, and consistent evaluation across doctoral programs. It aligns with ESU's academic standards, the Pennsylvania State System of Higher Education's emphasis on responsible AI use, and the advisory role of the ESU AI Recommendation Committee (AIRC), while also reflecting broader national guidance on the responsible integration of artificial intelligence in education. It remains responsive to evolving technologies and disciplinary norms.

By grounding AI use in enduring principles rather than fixed prescriptions, these guidelines aim to empower doctoral candidates and faculty to engage thoughtfully with emerging tools while preserving the integrity and purpose of doctoral scholarship at ESU.

Table of Contents

COMMON TERMS AND DEFINITIONS 3

TOPIC 1: PURPOSE AND SCOPE OF AI USE IN THE DISSERTATION PROCESS 5

TOPIC 2: SCHOLARLY OWNERSHIP, ORIGINALITY, AND RESPONSIBILITY 6

TOPIC 3: AI AS PROCESS SUPPORT—BOUNDARIES IN THINKING AND WRITING 7

TOPIC 4: VERIFICATION, ACCURACY, AND AI-GENERATED CLAIMS 9

TOPIC 5: TRANSPARENCY, DISCLOSURE, AND DOCUMENTATION OF AI USE 10

TOPIC 6: ETHICAL CONSIDERATIONS, BIAS, AND LIMITATIONS OF AI TOOLS 11

TOPIC 7: DATA PRIVACY, SECURITY, AND RESPONSIBLE HANDLING OF INFORMATION 13

TOPIC 8: EVOLVING TECHNOLOGIES, REVIEW, AND ONGOING GUIDANCE 14

TOPIC 9: ROLES AND RESPONSIBILITIES IN THE USE OF AI 15

CONCLUSION 16

REFERENCES AND CONSULTED SOURCES 17

Common Terms and Definitions

The following terms are used throughout this document to support shared understanding and consistent interpretation of guidance related to the use of artificial intelligence (AI) in the doctoral dissertation process at East Stroudsburg University (ESU).

Advisory Bodies:
Institutional groups, such as the AI Recommendation Committee (AIRC), that provide guidance, recommendations, or support related to ethical, pedagogical, or policy considerations surrounding AI use.

Artificial Intelligence (AI):
For the purposes of this guideline, artificial intelligence refers to computational tools or systems capable of generating text, images, data summaries, or other outputs based on patterns in existing data. This includes generative AI tools commonly used for writing support, information synthesis, or analytical assistance.

Data Privacy and Security:
The obligation to protect confidential, sensitive, or identifiable information in accordance with institutional policies, research protocols, and applicable legal or ethical standards when using AI tools.

Dissertation Chair and Committee:
Faculty members responsible for mentoring, guiding, and evaluating the doctoral candidate's dissertation work, including assessment of scholarly rigor, originality, and integrity.

Doctoral Candidate:
A student formally enrolled in a doctoral program at ESU who is engaged in dissertation-related work under the guidance of a dissertation chair and committee.

Doctoral Dissertation:
The culminating scholarly work required for completion of a doctoral degree at ESU, demonstrating independent inquiry, original contribution to the field, and the candidate's ability to defend their work through established academic processes.

Ethical Use:
The application of AI tools in ways that reflect awareness of bias, limitations, equity considerations, and scholarly responsibility, consistent with institutional values and disciplinary norms.

Generative Artificial Intelligence (Generative AI):
A category of AI systems designed to produce new content—such as text, images, code, or audio—based on patterns learned from large datasets. In the context of doctoral scholarship, generative AI tools are most commonly used to assist with drafting, summarizing, editing, brainstorming, and coding tasks.

Human-in-the-Loop (HITL):
A framework in which human judgment remains central to decision-making, with AI tools serving as supportive or augmentative systems rather than autonomous decision-makers. Federal guidance emphasizes maintaining human oversight in educational contexts to preserve accountability, professional judgment, and ethical responsibility (U.S. Department of Education, 2023).

Process Support:
The use of AI tools to assist with workflow-related aspects of scholarly work—such as organizing ideas, improving clarity, or supporting revision—without replacing the candidate's independent reasoning, analysis, or decision-making.

Product Substitution:
The use of AI tools in ways that replace core intellectual labor, including generating original arguments, analyses, interpretations, or conclusions that the doctoral candidate cannot independently explain or defend.

Scholarly Ownership:
The responsibility of the doctoral candidate to claim, explain, and defend all ideas, arguments, analyses, interpretations, and conclusions presented in the dissertation, regardless of whether AI tools are used during the process.

Transparency / Disclosure:
Open and honest communication regarding the nature and purpose of AI use in the dissertation process, intended to support mentorship, evaluation, and academic integrity rather than punitive oversight.

Verification:
The practice of independently confirming the accuracy, credibility, and relevance of information or claims, including those surfaced or generated by AI tools, prior to inclusion in scholarly work.

Topic 1: Purpose and Scope of AI Use in the Dissertation Process

Principle
Artificial intelligence (AI) tools may be used in the doctoral dissertation process at East Stroudsburg University (ESU) to support scholarly work, provided their use preserves core expectations of doctoral education: independent inquiry, original contribution, and intellectual accountability.

Scope of Application
These guidelines apply to doctoral students engaged in dissertation-related activities, including topic development, proposal writing, literature review, data analysis, drafting, revision, and preparation for the oral defense. They also serve as a reference for dissertation chairs and committee members.

At ESU, the dissertation is both a scholarly product and a developmental process through which candidates demonstrate readiness to contribute independently to their field. Any use of AI must therefore align with expectations that candidates can explain, justify, and defend their scholarly decisions throughout the dissertation process.

Institutional Alignment
This guidance reflects alignment with ESU doctoral expectations, the Pennsylvania State System of Higher Education (PASSHE) emphasis on responsible and judgment-based AI use, the advisory role of the AI Recommendation Committee (AIRC), and established doctoral pedagogy that frames the dissertation as a formative scholarly experience.

Purpose
These guidelines are intended to:

- clarify appropriate and inappropriate uses of AI in dissertation work;
- support ethical and informed decision-making by doctoral candidates;
- provide faculty with a shared evaluative framework; and
- promote consistency, transparency, and trust in doctoral scholarship.

They are advisory in nature and not intended to function as enforcement mechanisms.

Summary
These guidelines establish a principled foundation for responsible AI use in doctoral dissertation work at ESU.

Topic 2: Scholarly Ownership, Originality, and Responsibility

Principle
Doctoral dissertations at ESU must represent the original scholarly work of the doctoral candidate. Responsibility for all ideas, arguments, interpretations, and conclusions rests entirely with the candidate, regardless of whether AI tools are used.

Application
Doctoral candidates are expected to demonstrate ownership of their work through the ability to articulate reasoning, explain methodological choices, and defend conclusions during proposal reviews, committee meetings, and the oral defense.

Any AI use must preserve the candidate's clear intellectual authorship and accountability.

Institutional Alignment
This principle aligns with ESU doctoral standards, PASSHE guidance on responsible AI use, the advisory posture of AIRC, and doctoral pedagogy emphasizing scholarly identity and responsibility.

Boundaries
AI use is appropriate when it supports organization, clarity, or efficiency without replacing intellectual labor. AI use is inappropriate when it generates substantive scholarly content or obscures authorship.

Summary
Scholarly ownership and accountability are foundational to doctoral education at ESU. AI tools may assist the dissertation process, but responsibility for scholarly judgment and contribution always remains with the doctoral candidate.

Topic 3: AI as Process Support—Boundaries in Thinking and Writing

Federal guidance has emphasized the importance of maintaining 'human in the loop' decision-making in educational contexts, reinforcing the distinction between AI as augmentation rather than substitution (U.S. Department of Education, 2023).

Principle
Artificial intelligence (AI) tools may be used in the dissertation process at ESU to support scholarly processes, but they must not substitute for the intellectual work required to demonstrate doctoral-level reasoning, synthesis, and contribution. This distinction applies across all phases of dissertation work, including thinking, analysis, and writing.

Application at ESU
At ESU, the dissertation is evaluated as evidence of a candidate's capacity for sustained inquiry, critical judgment, and independent scholarly reasoning. Dissertation chairs and committees assess not only the final written document but also the candidate's ability to explain, justify, and defend their thinking during proposal reviews, committee meetings, and the oral defense.

AI use is therefore appropriate only when it supports how candidates work—such as organizing ideas or refining clarity—without determining what they argue, interpret, or conclude.

Institutional Alignment
This guidance aligns with ESU doctoral expectations, PASSHE's emphasis on responsible, judgment-based AI use, the advisory role of AIRC, and doctoral pedagogy that frames the dissertation as a developmental scholarly process rather than a production task.

Process Support vs. Product Substitution
AI functions as process support when it assists with workflow while preserving intellectual ownership.

Examples include:

- organizing notes, outlines, or research materials;
- identifying areas that may require clarification or further development;
- supporting grammar, formatting, or stylistic consistency; or
- prompting reflection that the candidate independently evaluates and revises.

AI constitutes product substitution when it replaces core intellectual labor. Examples include:

- generating original arguments, interpretations, or conclusions;
- synthesizing literature or data in place of the candidate's own analysis;
- producing substantive text the candidate cannot independently explain or defend; or
- shaping scholarly voice or reasoning without the candidate's full engagement.

Writing as Cognitive Work
In doctoral education, writing is a central cognitive activity through which scholarly thinking develops. Drafting and revising text are not merely mechanical tasks but essential processes for clarifying arguments, testing interpretations, and developing scholarly voice.

AI tools may support surface-level aspects of writing, but they must not replace the reasoning, synthesis, or judgment that doctoral writing is intended to demonstrate.

Summary

AI tools may support the process of thinking and writing in doctoral work at ESU, but they must not substitute for the product of independent intellectual labor. Maintaining this boundary preserves the integrity, evaluative purpose, and developmental goals of the doctoral dissertation.

Topic 4: Verification, Accuracy, and AI-Generated Claims

Principle
Doctoral candidates are responsible for the accuracy and validity of all claims presented in their dissertation. Any AI-generated content must be treated as unverified until independently evaluated and confirmed by the candidate.

Application
At ESU, candidates must be able to trace claims to credible sources, explain how evidence was evaluated, and justify the inclusion of research findings during proposal reviews and the oral defense. The use of AI does not alter these expectations.

Institutional Alignment
This expectation reflects ESU doctoral standards, PASSHE's emphasis on accountability and responsible AI use, AIRC guidance, and doctoral pedagogy emphasizing critical evaluation of sources.

Verification Expectations
When AI tools are used to surface factual information or research summaries, candidates are expected to:

- independently verify all factual assertions;
- confirm the existence and relevance of cited sources;
- assess potential bias, incompleteness, or misrepresentation; and
- ensure appropriate scholarly context.

Summary
AI tools may assist in surfacing or organizing information, but responsibility for verification, accuracy, and scholarly integrity always rests with the doctoral candidate.

Topic 5: Transparency, Disclosure, and Documentation of AI Use

Federal guidance further emphasizes transparency as foundational to trust in educational AI deployment, reinforcing the importance of clear communication about when and how AI tools are used (U.S. Department of Education, 2023).

Principle
Transparency in the use of artificial intelligence (AI) tools is essential to maintaining trust, academic integrity, and consistent evaluation in doctoral dissertation work at East Stroudsburg University (ESU). Doctoral candidates are expected to engage in open and honest communication regarding their use of AI tools throughout the dissertation process.

Application at ESU
At ESU, dissertation work is developed in close collaboration with dissertation chairs and committees. Transparency about AI use supports shared understanding of how tools are being used and ensures that scholarly evaluation remains fair and meaningful.

Disclosure is not intended to function as self-policing or confession, but as a professional practice that enables informed mentorship, guidance, and assessment.

Institutional Alignment
This expectation aligns with ESU doctoral standards, the Pennsylvania State System of Higher Education (PASSHE) emphasis on ethical and responsible AI use, the advisory role of the AI Recommendation Committee (AIRC), and doctoral pedagogy that emphasizes honesty and integrity in scholarly representation.

Disclosure and Documentation Expectations
Doctoral candidates are expected to:

- discuss AI use with their dissertation chair and committee as appropriate;
- describe the general nature and purpose of AI use when relevant to the dissertation process;
- clarify which aspects of the work involved AI-supported processes; and
- retain sufficient documentation to explain and defend AI use if questions arise during review or defense.

Documentation should be proportional and purposeful, focusing on clarity rather than exhaustive technical detail.

Inappropriate Practices
Lack of transparency regarding AI use is inconsistent with doctoral expectations when it:

- obscures how ideas, analyses, or text were developed;
- prevents faculty from evaluating the candidate's independent contribution; or
- misrepresents the nature of the candidate's scholarly work.

Summary
Transparent disclosure of AI use supports ethical scholarship, effective mentorship, and fair evaluation. By approaching disclosure as a professional norm rather than a punitive requirement, ESU affirms responsible engagement with AI while preserving the integrity of the doctoral dissertation process.

Topic 6: Ethical Considerations, Bias, and Limitations of AI Tools

The U.S. Department of Education's 2023 report highlights concerns regarding bias, equity, and unintended consequences in AI systems, underscoring the need for critical evaluation and responsible use in doctoral research contexts.

Principle
Artificial intelligence (AI) tools reflect the data, assumptions, and design choices embedded in their development. As a result, their outputs may contain bias, inaccuracies, or omissions. Doctoral candidates at East Stroudsburg University (ESU) are expected to engage with AI tools critically and ethically, recognizing both their potential value and inherent limitations.

Application at ESU
Ethical scholarship at ESU requires doctoral candidates to demonstrate sound judgment in evaluating sources, methods, and interpretations. The use of AI does not replace this responsibility. Instead, it introduces additional considerations related to bias, reliability, and equity that candidates must thoughtfully address.

Candidates should approach AI outputs as provisional inputs rather than authoritative sources.

Institutional Alignment
This guidance aligns with ESU's commitment to ethical research and academic integrity, the Pennsylvania State System of Higher Education (PASSHE) emphasis on responsible and inclusive AI use, and the advisory mission of the AI Recommendation Committee (AIRC). It also reflects doctoral pedagogy that emphasizes reflexivity, ethical reasoning, and awareness of limitations in scholarly inquiry.

Bias and Limitations
AI tools may:

- reflect historical or systemic biases present in training data;
- privilege dominant perspectives while marginalizing others;
- generate oversimplified or context-insensitive responses; or
- produce confident-sounding but inaccurate information.

Doctoral candidates are expected to recognize these limitations and apply disciplinary knowledge, critical judgment, and ethical reasoning when engaging with AI-supported outputs.

Ethical Use in Dissertation Work
Ethical AI use in the dissertation process includes:

- evaluating AI outputs for bias, exclusion, or distortion;
- ensuring that marginalized or underrepresented perspectives are not inadvertently erased;
- avoiding overreliance on AI-generated interpretations; and
- maintaining awareness of how AI tools may shape scholarly framing or emphasis.

Summary

Ethical engagement with AI tools requires awareness of bias, limitations, and contextual sensitivity. By approaching AI outputs critically and reflexively, doctoral candidates at ESU can use these tools responsibly while upholding the ethical standards of doctoral scholarship.

Topic 7: Data Privacy, Security, and Responsible Handling of Information

Federal guidance also calls attention to data governance and privacy protections in educational AI contexts, reinforcing careful consideration of what information is entered into AI systems (U.S. Department of Education, 2023).

Principle
Doctoral candidates at East Stroudsburg University (ESU) are responsible for protecting the privacy, confidentiality, and security of data used in dissertation research. The use of artificial intelligence (AI) tools must comply with applicable ethical standards, institutional policies, and legal requirements related to data protection.

Application at ESU
Dissertation research at ESU may involve sensitive, proprietary, or human-subject data. When AI tools are used in connection with such data, candidates must exercise heightened care to ensure that information is handled appropriately and not exposed through unauthorized platforms or services.

AI tools should not be used in ways that compromise confidentiality, violate research approvals, or conflict with institutional or regulatory requirements.

Institutional Alignment
This guidance aligns with ESU expectations for ethical research conduct, PASSHE-wide attention to responsible and secure technology use, and the advisory scope of the AI Recommendation Committee (AIRC). It also reflects doctoral research standards that prioritize participant protection, data stewardship, and institutional compliance.

Responsible Use Expectations
Doctoral candidates are expected to:

- avoid entering confidential, identifiable, or protected data into AI tools that do not meet security or privacy standards;
- follow approved research protocols, including IRB requirements where applicable;
- understand the data-handling practices of AI platforms they use; and
- consult with their dissertation chair or relevant offices when uncertainty exists regarding appropriate data use.

AI Tools and Research Data
AI tools may be appropriate for working with de-identified, publicly available, or synthetic data, provided such use does not introduce ethical or methodological concerns. Candidates remain responsible for ensuring that AI-assisted processes do not inadvertently re-identify data or alter its integrity.

Summary
Responsible AI use in dissertation research includes careful attention to data privacy and security. By exercising judgment and adhering to institutional standards, doctoral candidates at ESU can integrate AI tools into their work without compromising ethical research practices or participant trust.

Topic 8: Evolving Technologies, Review, and Ongoing Guidance

The U.S. Department of Education maintains a public inventory of AI use cases across its offices, signaling that AI integration is evolving and requires ongoing review and adaptive guidance.

Principle
Artificial intelligence (AI) technologies are rapidly evolving. Guidelines governing their use in doctoral dissertation work must therefore remain adaptable, reflective, and open to periodic review. East Stroudsburg University (ESU) recognizes that responsible AI use is not static and requires ongoing assessment as tools, practices, and expectations change.

Application at ESU
These guidelines are intended to support current doctoral candidates and faculty while acknowledging that AI tools, capabilities, and norms will continue to develop. As such, the guidance provided here should be interpreted as responsive rather than fixed, and subject to refinement over time.

Faculty, doctoral candidates, and academic leaders are encouraged to remain attentive to emerging developments and to engage in dialogue as new questions arise.

Institutional Alignment
This approach aligns with ESU's commitment to academic rigor and innovation, PASSHE's emphasis on thoughtful and forward-looking technology integration, and the advisory role of the AI Recommendation Committee (AIRC). It also reflects doctoral pedagogy that values adaptability, reflection, and scholarly growth.

Review and Updating
These guidelines may be reviewed and updated periodically to:

- reflect changes in AI technologies and scholarly practices;
- respond to emerging ethical, legal, or pedagogical considerations; and
- incorporate feedback from doctoral students, faculty, and institutional committees.

Such reviews may be conducted in consultation with relevant academic units and advisory bodies.

Future Guidance
As AI tools become more integrated into academic work, additional guidance, examples, or training resources may be developed to supplement this document. This guideline is intended to function as a foundational framework rather than an exhaustive or final authority on AI use in doctoral work.

Summary
By acknowledging the evolving nature of AI technologies, ESU affirms a commitment to responsible innovation grounded in reflection, dialogue, and periodic review. This approach ensures that guidance remains relevant while preserving the core values of doctoral scholarship.

Topic 9: Roles and Responsibilities in the Use of AI

Principle
The responsible use of artificial intelligence (AI) in the doctoral dissertation process at East Stroudsburg University (ESU) depends on shared responsibility among doctoral candidates, dissertation chairs, committee members, and institutional advisors. Clear understanding of roles supports consistency, transparency, and effective mentorship.

Doctoral Candidates
Doctoral candidates are responsible for:

- ensuring that all dissertation work reflects their independent scholarly judgment and original contribution;
- using AI tools in ways consistent with these guidelines and institutional expectations;
- verifying the accuracy and appropriateness of all content included in the dissertation;
- communicating transparently with dissertation chairs and committees about AI use; and
- being prepared to explain and defend their work, including any AI-supported processes, during reviews and the oral defense.

Dissertation Chairs and Committees
Dissertation chairs and committee members are responsible for:

- guiding candidates in ethical and appropriate scholarly practices;
- clarifying expectations regarding AI use within disciplinary norms;
- evaluating dissertation work based on demonstrated scholarly reasoning, originality, and rigor; and
- engaging in open dialogue with candidates when questions about AI use arise.

Faculty are not expected to serve as technical experts on AI tools, but rather as evaluators of scholarly quality and integrity.

Institutional and Advisory Bodies
Institutional bodies, including academic units and advisory committees such as the AI Recommendation Committee (AIRC), may:

- provide guidance on ethical, pedagogical, or policy-related considerations;
- support consistency across programs and disciplines;
- monitor emerging trends and risks related to AI use; and
- recommend updates or supplemental resources as appropriate.

Resolving Uncertainty
When uncertainty exists regarding appropriate AI use, doctoral candidates are encouraged to consult their dissertation chair as a first point of contact. Additional guidance may be sought from relevant institutional offices or advisory bodies when needed.

Summary
Clear delineation of roles supports responsible AI use, effective mentorship, and fair evaluation. By sharing responsibility across individuals and institutions, ESU affirms a collaborative approach to integrating AI into the doctoral dissertation process.

Conclusion

The integration of artificial intelligence into academic work presents both opportunities and responsibilities for doctoral education. These guidelines affirm East Stroudsburg University's commitment to scholarly rigor, ethical judgment, and responsible innovation by offering a principled framework for the thoughtful use of AI in the doctoral dissertation process.

Rather than prescribing exhaustive rules or tool-specific mandates, this document emphasizes core doctoral values: intellectual ownership, critical reasoning, transparency, verification, and ethical awareness. By centering these values, the guidelines support doctoral candidates and faculty in navigating AI use with confidence, clarity, and shared understanding.

The dissertation remains a defining scholarly milestone—one that reflects a candidate's ability to engage in independent inquiry, contribute original knowledge, and defend their work with integrity. AI tools may support aspects of this process, but they do not replace the intellectual labor, judgment, or responsibility that doctoral scholarship requires.

As AI technologies continue to evolve, these guidelines are intended to function as a living framework—responsive to change while grounded in enduring academic principles. Through ongoing dialogue, reflection, and collaboration among doctoral candidates, faculty, and institutional partners, ESU will continue to support responsible engagement with emerging tools while preserving the integrity of doctoral education.

References and Consulted Sources

The development of these guidelines was informed by institutional policies, system-level guidance, peer institution practices, and established scholarship on doctoral education.
