

AI in the Office Suite:

Practical Skills & Data Responsibility

Fernando Alcántar

Director of Student Engagement · EdD Candidate

DATE

Friday, April 10

TIME

12:00 – 1:00 p.m.

ROOM

Stroud Hall 314

Today's Workflow

Three tools. One connected workflow. Real data.

01

ChatGPT

Combine the Data

Three years of participation data, merged into one clean spreadsheet.

02

Excel + Copilot

Analyze & Visualize

Ask Copilot to find trends, patterns, and generate charts — right inside Excel.

03

PowerPoint + Claude

Build the Deck Live

Copy Copilot's output, paste it into Claude's panel inside PowerPoint, and watch the slides build.

STEP 01

Combine the Data

Using ChatGPT to merge three years of participation data into one clean file.

WHAT YOU'LL DO

- 01 Upload three separate spreadsheets — one per academic year
- 02 Prompt ChatGPT to consolidate them into a single, unified dataset
- 03 Review and confirm the merged output looks clean and consistent
- 04 Download the combined file — ready for the next step

SAMPLE PROMPT

"I have three Excel files with workshop participation data from 2022, 2023, and 2024. Each has the same column structure. Please combine them into one spreadsheet, add a Year column to identify each row, and remove any duplicates."

 *Tip: Be specific about column names and what 'clean' looks like to you.*

Before We Touch Any Data:

The Traffic Light Test

RED — STOP

Never share this

- Student names & IDs
- Social Security Numbers
- FERPA-protected records
- Medical or financial data

YELLOW — CAUTION

Think before you share

- Demographics (First-Gen, race/ethnicity)
- Aggregate data that could be re-identified
- Department-level trends
- Enrollment patterns by group

GREEN — GO

Safe to use

- Public participation counts
- Session attendance totals
- Published program outcomes
- Our workshop data today ✓

Switching to ChatGPT

*Watch as ChatGPT combines three spreadsheets into one.
Notice how we prompt it — and what to look for in the output.*

S T E P 0 1 O F 0 3

STEP 02

Analyze & Visualize

Using Excel's Copilot to surface trends and generate charts — no formulas required.

WHAT COPILOT CAN DO

Identify participation trends across all three years

Generate charts and visualizations automatically

Suggest insights and highlight patterns in plain language

Answer questions about your data in natural language

TRY ASKING COPILOT

"Show me participation by year as a bar chart"

"Which year had the highest attendance?"

"Highlight any months with unusually low participation"

"Summarize the overall trend in one sentence"

L I V E D E M O

Switching to Excel + Copilot

Watch as Copilot analyzes our combined dataset and generates charts directly inside Excel — no formulas needed.

S T E P 0 2 O F 0 3

STEP 03

Build the Deck Live

Using Claude inside PowerPoint to turn data insights into a finished presentation — in real time.

HOW IT WORKS

- 01 Copy Copilot's analysis output from Excel
- 02 Open PowerPoint and launch the Claude side panel
- 03 Paste the output and prompt Claude to build the slides
- 04 Watch the presentation take shape — live, in front of the room

SAMPLE PROMPT

"Here is a summary of our workshop participation data from 2022–2024. Please create a 5-slide presentation with a title slide, a key trends slide, a chart slide, a highlights slide, and a next steps slide. Keep it professional and concise."

 *The more context you give Claude, the better the output.*

L I V E D E M O

Switching to PowerPoint + Claude

*Watch as Claude builds slides live inside PowerPoint
using the data analysis we just created in Excel.*

What to Take With You

These tools work together — and they work for you.

AI tools are collaborative

ChatGPT, Copilot, and Claude each have strengths. The power is in connecting them.

Always run the Traffic Light test

Before any data goes into an AI tool, ask: Red, Yellow, or Green?

Prompting is a skill

Specific prompts get better results. The more context you give, the more useful the output.

You're already doing this

Today's workflow is one you can adapt immediately in your own office and courses.
