This session moves from concept to practice. We'll open real spreadsheets and slide decks, use AI tools to draft, organize, and visualize — and pause along the way to ask the questions that matter: What data should we never put in these tools? Where does your work go? Who is responsible when AI gets it wrong?

## WHAT WE'LL COVER

- Using Claude & Copilot in Excel to analyze and visualize data
- Building AI-assisted PowerPoint presentations from scratch
- Hands-on practice with a sample spreadsheet and slide deck
- Data responsibility: what to share, what to protect
- Ethical use of AI tools in institutional workflows
- Consumer vs. enterprise accounts — why it matters at ESU
